

ORACLE PEOPLESOFT ACCELERATOR

End-to-End Business Process Testing in the Cloud

TurnKey's PeopleSoft Accelerator reduces risk, lengthy testing, and high costs. By leveraging best practices, critical business processes are tested quickly and easily with a single, integrated testing solution.

The PeopleSoft Accelerator works in tandem with cFactory™ scriptless automated testing helping you achieve faster time to value, even within your highly customized ERP environments. Deploy applications sooner while minimizing the cost and complexity of application testing.

“Testing dropped from 3 months to 4 days, and 20 people to 1 people and better test coverage with TurnKey Solutions.”

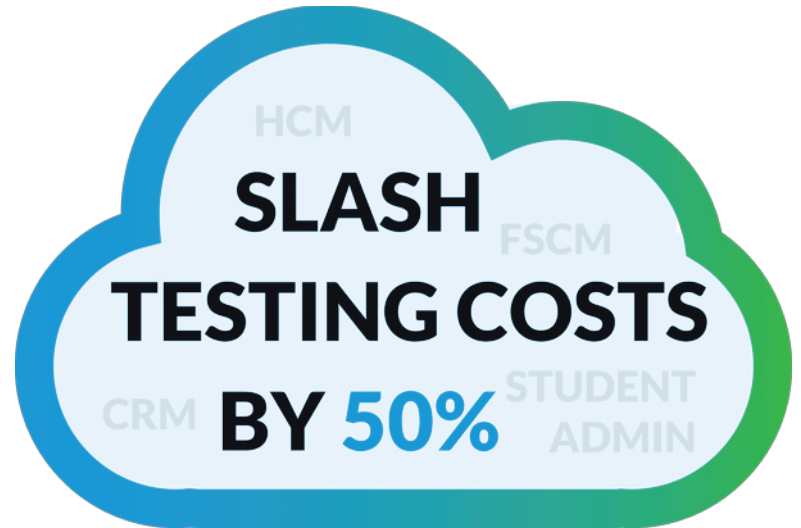

*Brendan Woods,
Group Head of Systems Delivery*

ORACLE®

PEOPLESOFT

 cFactory™

 PeopleSoft Accelerator™

SMART AUTOMATION. TOTAL BENEFITS.

- Deep domain expertise in both PeopleSoft and test automation
- Automated testing tools and pre-built content that minimizes time-to-value and ongoing maintenance
- Services at every step, for every situation

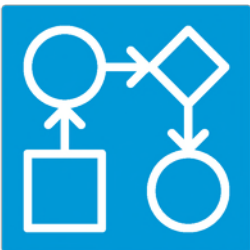

ORACLE PEOPLESOFT ACCELERATOR

End-to-End Business Process Testing in the Cloud

Pre-Automated Test Cases and Components for Faster Results

Part of the HP Quality Center Software suite, the Accelerator includes pre automated test cases for commonly used PeopleSoft modules, including Human Capital Management, Financial Management, Supplier Relationship Management, and Supply Chain Management. Non-technical users can also create new tests or maintain existing ones using our test case generator, cFactory.

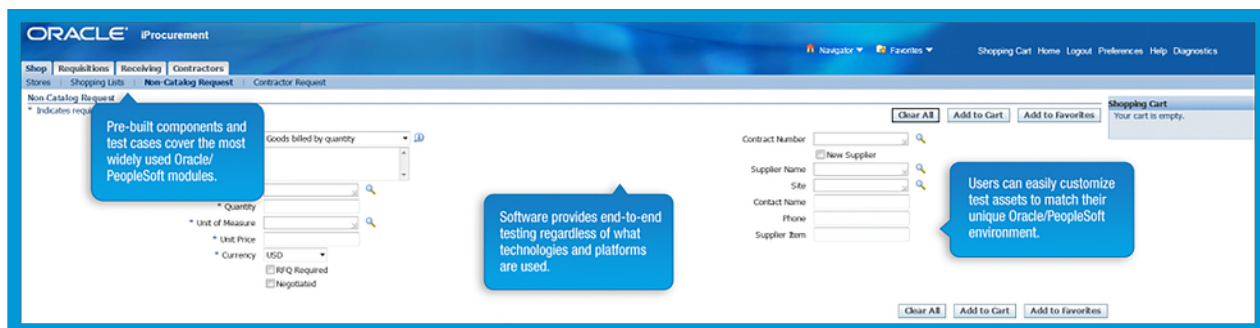

Intuitive Customization for Your Environment

Our intuitive UI walks you through the process, tailoring tests to match your unique business processes. For more comprehensive, end-to-end integration, we help you create larger test scenarios using simple drag-and-drop screens. Our intelligent data-driven technology then automates the execution of these tests immediately or at a later scheduled time.

Built-In, Trouble-Free Maintenance

Comprehensively test and improve the quality provided to end-users for new implementations, upgrades, maintenance packs, feature packs, customizations, and even third party applications with minimum time and effort. In the process, the Accelerator significantly decreases the time-to-production for the system changes while reducing testing resources and your PeopleSoft total cost of ownership.
