

COMPREHENSIVE TEST AUTOMATION AND TEST DATA MANAGEMENT

Finally a comprehensive end-to-end test automation suite, with fully integrated test data on demand.

- ✓ Model Application Business Flows
- ✓ Generate Exactly The Right Test Data On-Demand
- ✓ Automate On-Going Maintenance Of Test Cases
- ✓ Create Optimized Test Data Scenarios
- ✓ Automate Functional And Regression Testing

5X Shortened Test Cycles

Proactive Defect Discovery

50-80% Savings in Test Maintenance

80% Increase in Test Coverage

FASTER TIME TO BUSINESS AGILITY

The nature of DevOps and Agile requires organizations to deploy updates and changes faster and faster. Two common obstacles to achieving this goal are the inability to quickly test changes, and the constant wait for test data.

The integration of TurnKey’s cFactory and CA Technologies’ Test Data Manager and Agile Requirements Designer solves that problem and puts you ahead of your competition.

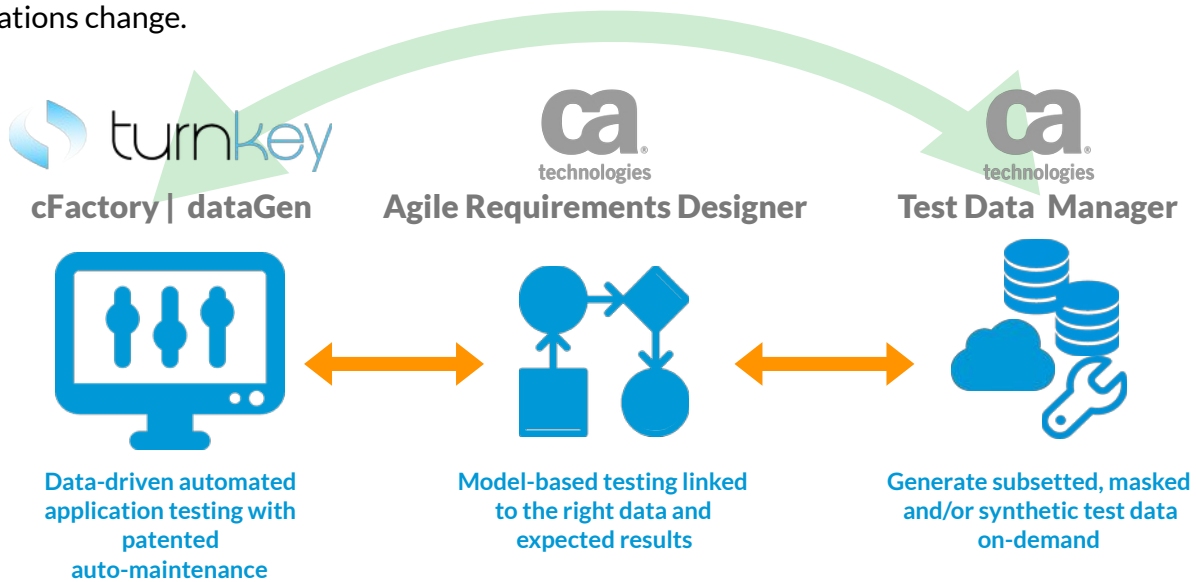

ALMAC

- Cut end-to-end testing from 3 months to 3-4 days
- Eliminated the need for 20 people to assist in the process
- Increased test coverage across entire end-to-end business processes

COMPREHENSIVE TEST AUTOMATION AND TEST DATA MANAGEMENT

HOW IT WORKS

Leverage world-class capabilities of TurnKey's true data-driven test automation fully integrated with CA Technologies' Test Data Manager and Agile Requirements Designer to automatically create test cases, model your business flows, generate exactly the right test data on demand, and automatically maintain test assets as your applications change.

TURNKEY ACCELERATORS PROVIDE PRE-BUILD CONTENT FOR:

Create and Model Test Cases Automatically: With TurnKey cFactory's unique *Learn* feature, test cases including every iteration of your end-to-end business processes are created automatically. CA's Agile Requirements Designer can then graphically model your business flows for model-based testing.

Generate Test Data On Demand: Generate exactly the right test data—on demand—for every iteration of your processes. Whether you need subsetted, masked, historical or synthetic data, you'll have the test data you need for immediate consumption.

Maintain Test Assets Automatically: With TurnKey's patented Evergreen Automation, your application changes are automatically detected and presented in a cross-comparison with your current test assets. You can automate these updates, or decide which changes to accept. Either way, your maintenance time and costs will be reduced by up to 90% or more.
