Scriptless Mobile App Testing Made Easy
Data-Driven Test Creation and Maintenance for Mobile

Mobile applications are pervasive across enterprises today. Access to core business functions via a mix of mobile devices and platforms provides ease and flexibility to the end user. As mobile apps continue to proliferate, the ability to test functionality and integration between mobile apps and backend systems becomes increasingly complex. So how can you extend application testing to validate all the options available?

TurnKey cFactory™ Mobile can help. This software gives you tools to speed mobile app testing and increase test coverage across platforms, versions and devices. In addition, cFactory™ Mobile bridges the gap between traditional and mobile solutions so you get powerful, yet simplified end-to-end test management.

End-to-End Testing, from Desktop to Mobile

cFactory™ Mobile offers the same advanced capabilities that customers expect with TurnKey's Scriptless Testing. The software helps to automate each stage of the testing process and extends support from traditional applications to mobile. QA teams can test concurrently across all applications and platforms to easily validate communication between the various systems. And since the software is built on HP ALM, you get powerful and seamless testing across your business.

Dynamic Test Creation and Maintenance

Unlike traditional test automation solutions, cFactory™ Mobile allows you to quickly create a library of test components for easy customization and reuse. Test flows work in much the same way as manual testing today, so adoption is fast and easy. And as applications change, users can update test sets easily with a few clicks of the mouse. No more dealing with complicated scripts. Your teams can auto-create and auto-update test sets using a more comprehensive and agile testing framework.
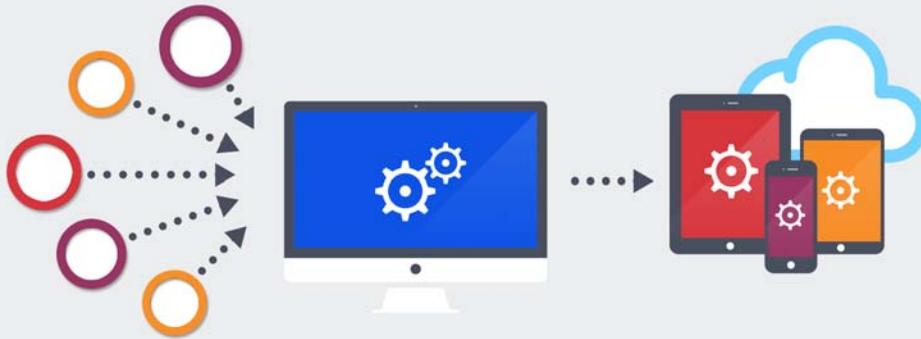

Secure, Comprehensive Testing Across Devices

When it comes to mobile testing, the ability to test on actual devices increases speed and accuracy. Mobile Labs Trust™ enables cFactory™ Mobile to provide comprehensive testing for iPhone®, iPad®, Android™ phones and tablets. It also enables remote management of devices, with test tracking and monitoring for a healthier and more stable test environment. The private mobile device cloud keeps applications secure and enables 24x7 remote access to all devices.

TurnKey cFactory™ Mobile, Mobile Labs Trust™, and HP ALM offer Scriptless Test Automation across the enterprise.

A Single Testing Platform for Your Business

Tightly coupled with HP ALM, cFactory™ Mobile supports the most comprehensive list of technologies and platforms on the market today. This means you can validate entire end-to-end business processes—including mobile apps—and test solutions that span multiple systems and technologies, all within a single testing platform.

Mobile Testing Components

• cFactory™ Mobile Scriptless Testing Software–automated, BPT component generator that works with any application supported by UFT.

• Mobile Labs deviceConnect™–private mobile cloud delivers 24x7 secure, remote device access.

• Mobile Labs Trust™–HP UFT plug-in allows you to build test cases for native apps, hybrid apps and mobile web sites.

• HP ALM–unified application lifecycle management software that helps you to define, build, test and deliver quality, enterprise applications

Testing…as easy as 1-2-3

Auto-Create: Simply click through your application screens as the software builds test components for easy customization and reuse. These components can be dragged and dropped together to create test flows and fully automate an entire end-to-end business process.

Data-Driven: Using a true data-driven architecture, the software analyzes test data and automatically creates test flows to test all business scenarios. This helps to maximize test coverage, giving you the fewest number of test sets that you need to create and maintain.

Auto-Maintain: As applications change, cFactory™ automatically identifies these changes and allows you to view and apply updates across all your test sets and data. Visual cues walk you through the process so you can make updates with a simple click of the mouse.

> *Accelerate time to market*

> *Lower costs in test creation and maintenance*

> *Extend test coverage to minimize business risk*

> *Meet the demands of a dynamic agile environment*
